CQURE Experts speak at international events and engage in multiple cybersecurity projects – they bring their knowledge and experience to trainings. CQURE Academy also involves R&D – that is why CQURE Team is recognizable in the cybersecurity field.

## Convince The Boss: Advanced Windows Security Course 2026

Dear Manager,

I'd like to ask for your approval to join the Advanced Windows Security Course 2026, a unique 6 week program created and delivered by CQURE – a leading cybersecurity company. It is the most advanced course on the market on advanced Windows and cloud security, organized only once a year. Why it's worth the investment – both for me and for our company:

1. **Up-to-date skills for 2026 threats** – the agenda is refreshed every year and focuses on the newest challenges: ransomware, Zero Trust, AI in attack investigation, Kubernetes and Azure incident response, privilege escalation, and advanced Windows defenses.
2. **Hands-on knowledge I can apply immediately** – every session is based on real cases, with labs, tools, and exercises that translate directly into daily security operations.
3. **Learning from trusted experts** – the training is led by seasoned CQURE cybersecurity professionals, known worldwide for their field experience and contribution to the security community. The course has been on the market for many years, with hundreds of participants choosing to return year after year – a clear sign of the value. This edition marks the 10th anniversary, making it a truly special milestone.
4. **Practical value for the company** – stronger incident response readiness, improved detection strategies, better protection against cloud and insider threats, and fewer risks of costly security breaches.
5. **Recognized certification** – after the final exam I'll earn the official "Windows Security Master 2026" Certificate, which proves advanced, industry-level expertise.
6. **Convenient format** – the course is designed not to interfere with work duties: 12 modules spread over 6 weeks, taking place on Tuesdays & Thursdays, at 7 PM CET | 10 AM PDT | 1 PM EDT.

In short, this program will help me bring back not just theory, but concrete tools, playbooks, and strategies that we can use to strengthen our security posture. Since the course is only organized once a year, this is the only chance to join the 2026 edition.

Thanks for considering my request – I'm confident the benefits will quickly outweigh the cost.

Sincerely,

## About the Advanced Windows Security Course 2026

The Advanced Windows Security Course 2026 (AWSC) is the most advanced cybersecurity training on the market – a 6-week, intensive online program for experienced professionals, created and delivered by CQURE, one of the world's most trusted cybersecurity companies. The new edition starts on October 28th and includes 12 modules with 2 hours of live classes each, held twice per week (Tuesdays & Thursdays at 7 PM CET | 10 AM PDT | 1 PM EDT). The program combines expert-led sessions, hands-on training labs, and direct interaction with instructors, providing an outstanding learning experience that fits conveniently into a professional's workload. Organized only once a year, AWSC has become one of the most practical and respected trainings in advanced Windows and cloud security.

### Key Course Facts:

1. 12 focused modules covering incident response readiness, ransomware attack playbooks, AI in investigations, Zero Trust & ZTNA, OSINT in Azure, penetration testing, PowerShell for IR, privileged access defense in SQL Server, Azure Kubernetes security, TLS in Windows Server and .NET, and more.
2. Live & Interactive: participants can ask questions, join discussions, and solve exercises in real time.
3. Action-packed: only the most relevant and applicable techniques and strategies.
4. Extra benefits: access to tools, slides, homework, and a dedicated training lab.
5. Networking: exclusive Discord community for participants.
6. 12-month access: recordings of all sessions available for one year.
7. Certification: official CQURE "Windows Security Master 2026" after passing the final exam.

### Why it matters for organizations:

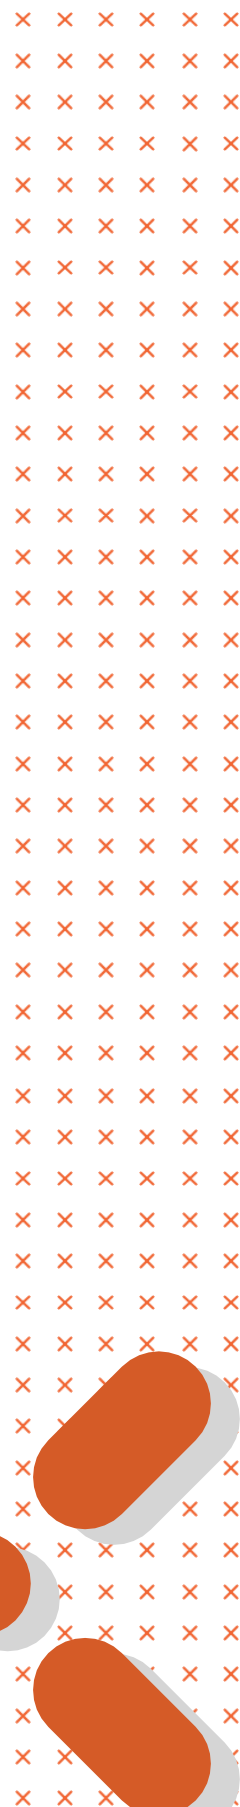

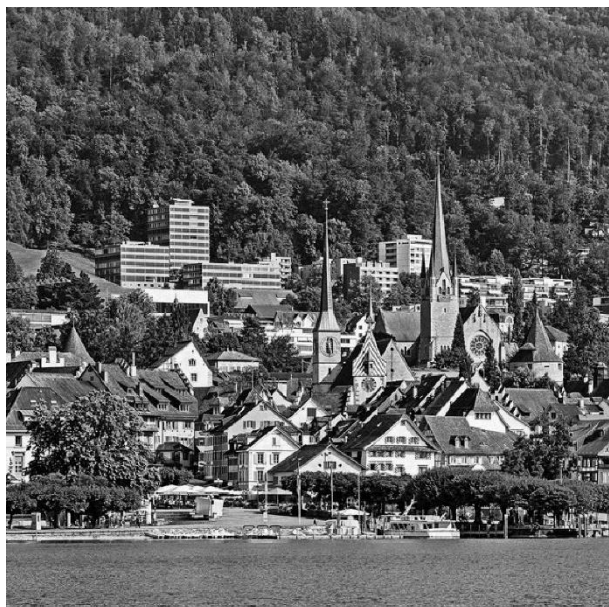

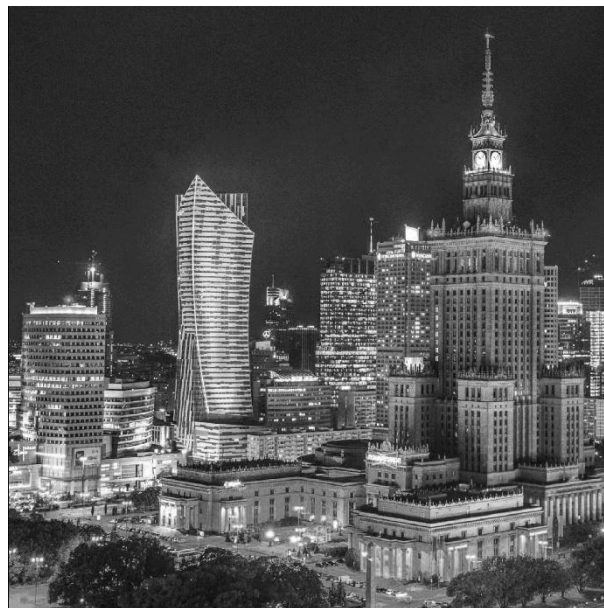

1. Keeps your security team ahead of evolving threats.
2. Provides practical knowledge directly transferable to daily operations.
3. Reduces dependency on external consultants by strengthening in-house expertise.
4. Builds confidence in defending against ransomware, insider threats, privilege escalation, and cloud-based attacks.
